

## **Allied Oil & Supply, Inc and driverDOC Partner to Streamline Fleet Transportation Logistics**

Omaha, Neb, November 10, 2021 – Allied Oil & Supply, Inc is pleased to announce it has recently entered into an agreement with driverDOC to be a preferred provider for industry leading supply chain technology to track freight and centralize documents.

“As one of the largest distributors of oil and lubricants in the Midwest, Allied has a long history of serving Transport, Consumer and Industrial Businesses,” said Josh Kolar, driverDOC Founder and CEO. “Allied realizes that the best way to advance their business and collect payments faster is by simplifying their processes. By leveraging driverDOC, not only have they shortened their invoicing cycle, but they have been able to free up their employees for value-added and meaningful activities. That is what driverDOC technology seeks to achieve.”

driverDoc’s powerful desktop and smartphone features capture high-quality geo-tagged images, centralize important freight documents to the Cloud, track freight in real time and on average collect invoices for payment seven days faster than a manual paper process.

“This is an outstanding opportunity for Allied to realize substantial cost savings and improve billing efficiencies,” said Teresa Scheidle, Allied Director of Sales Operations and IT. “The paperwork that took days to process, is now measured in hours. The storage and retrieval of electronic documents and proof of deliveries has never been simpler. driverDOC has significantly improved our business downtime.”

This agreement offers Allied other administrative tools, including a logistics management dashboard that offers real-time mapping and updates. Allied can keep drivers driving more with delay alerts, locate freight in real time, and generate more ROI for business.

### **Allied Oil & Supply, Inc:**

Allied Oil & Supply, Inc has over 60-years of experience serving Transport, Consumer and Industrial Businesses. Allied’s fleet of over 45-trucks and drivers deliver oil, lubricants, equipment and industrial services that meet quality standards that are measured, managed and audited in a consistent and comprehensive manner.

### **driverDOC:**

From the driver’s cab to the supply chain’s back office, the industry’s manual processes and paper documents waste time and money.

driverDOC provides cost savings to carriers and brokers by automating freight visibility, ETA calculations, and driver detention management, in addition to reducing the invoicing cycle. The platform captures real-time high-quality documents that are stored and organized by load number for immediate and stream-lined invoicing.

With a heavy reliance on emails, texts and phone calls for basic communication and driver updates, driverDOC believes in a safe, more efficient, and collaborative approach to freight and document visibility through technology and software. driverDOC is inclusive of the entire supply chain, by starting with the driver and making key data and documents accessible all the way to the back office.
